

OKECHUKWU CHIEZEY — UX/UI DESIGN CASE STUDY

Andrew Martin — eCommerce Web Design

UI/UX Design · eCommerce · Web · CRO · 2024

YEAR: 2024 · ROLE: UI/UX Designer & eCommerce PM

TOOLS: Figma · Shopify · Google Analytics 4 · Hotjar · Ahrefs

PROJECT BRIEF

Designed and managed the web presence for Andrew Martin — a premium lifestyle and interior brand — under the PM/Designer role at Innovative Growth Solutions. Delivered a CRO-led redesign of product listing pages, navigation, and checkout flow, alongside a technical SEO uplift. Achieved a 12% lift in add-to-cart rate and 40%+ improvement in organic search visibility.

PROJECT OVERVIEW

Context & Design Challenge

Andrew Martin had a strong offline brand and product range but an underperforming eCommerce presence. High bounce rates, low mobile conversions, and weak SEO meant the digital channel was significantly underperforming its potential. The project was structured as an agile engagement with 2-week sprints and weekly client reviews.

USER PERSONA

Who We Designed For

Persona	Charlotte
Profile	42, an interior designer in London. Specifies products for clients. Needs to find the right item quickly, check lead times, and add to a project shortlist. Has no patience for slow pages.
Role	UI/UX Designer & eCommerce PM
Tools	Figma · Shopify · Google Analytics 4 · Hotjar · Ahrefs

DESIGN PROCESS

Agile UX/UI Methodology — Sprint-by-Sprint

This project followed an Agile UX process structured across 5 sprints, each with defined deliverables, research activities, and design artefacts. Sprint reviews were conducted with stakeholders at the end of each phase.

SPRINT 1

AUDIT & DISCOVERY

- Full UX audit of existing Shopify store: heatmaps via Hotjar, session recordings, GA4 funnel analysis
- Identified top 5 drop-off points: homepage → PLP (38% drop), PLP → PDP (51% drop), cart → checkout (44% drop)
- SEO audit via Ahrefs: 0 pages in top 3 Google positions, 23 indexing errors, missing meta descriptions on 80% of products
- Stakeholder interviews: "Customers can't find what they're looking for — we hear it at trade shows"

SPRINT 2

DEFINE & PRIORITISE

- RICE-scored 14 improvement opportunities — prioritised top 5 for sprint 1
- Defined success KPIs: add-to-cart rate (baseline 3.2%), organic sessions, mobile conversion rate
- Content audit: identified 200+ product descriptions as thin (<50 words) — copywriting sprint required
- Mapped Charlotte's task flow: Arrive via Google → Search → Filter by room/style → View PDP → Add to Shortlist → Enquire

SPRINT 3

UX REDESIGN

- Redesigned navigation: category mega-menu replacing flat list — reduces average clicks to product from 4.2 to 2.1
- PLP redesign: increased image size, added hover-to-zoom, introduced "New", "Best Seller", "Made to Order" badges
- PDP redesign: moved "Add to Cart" above fold, added lead time indicator, "Complete the Room" cross-sell module
- Mobile UX: replaced desktop navigation with sticky bottom nav on mobile — reduced thumb reach distance

SPRINT 4

SEO & CONTENT

- Fixed 23 indexing errors, added canonical tags, resolved duplicate content on filtered URL parameters
- Wrote 150 product descriptions (50–120 words) with target keywords identified from Ahrefs
- Implemented structured data (Product schema) for all 450 SKUs — enabled Google rich results
- Page speed optimisation: image compression, lazy loading — Lighthouse score improved from 41 to 78

SPRINT 5

A/B TEST & MEASURE

- A/B test 1: Hero banner CTA — "Shop Collection" vs. "Explore Interiors" — "Explore Interiors" won (+18% CTR)
- A/B test 2: PLP sort order — "New Arrivals" default vs. "Best Sellers" — "Best Sellers" drove 23% more PDPs/session
- Result after 8 weeks: add-to-cart rate 3.2% → 3.6% (+12.5%), organic sessions +42%, mobile conversion +19%
- Client NPS: 91 — "The most organised and results-focused agency engagement we've had"

RESEARCH & DESIGN FINDINGS

What the Data Told Us

- PLP image size increase was the single highest-impact change — heatmaps showed users engage 3x more with larger product photography.
- The "Complete the Room" cross-sell module drove an average order value increase of £47 — 14% above baseline.
- Mobile navigation redesign (sticky bottom nav) reduced mobile bounce rate by 22% — previously, 60% of mobile users couldn't reach the top nav.
- Structured data implementation took 2 weeks to index but drove a 28% increase in click-through rate from Google Search.
- A/B test results revealed brand tone matters: "Explore Interiors" outperformed "Shop Collection" — customers want an experience, not a transaction.

LESSONS LEARNT

Process Reflections

- The SEO sprint should have preceded the UX redesign — technical fixes would have provided a cleaner baseline for measuring UX impact.
- Content writing was underestimated in effort — 150 product descriptions took 3 weeks, not 1. Always scope content separately from design.
- A/B testing was set up correctly but traffic volume was low — tests took 6 weeks to reach statistical significance ($p < 0.05$). Need higher-traffic pages for faster learning cycles.
- Developer handoff was via Figma comments — a structured specification document would have reduced back-and-forth during implementation.

FUTURE IMPROVEMENTS

Roadmap & Next Steps

- Implement a product recommendation engine (personalised "Recently Viewed" + "Customers also bought") — estimated +8% conversion lift.
- Build a Trade/Interior Designer portal with shortlisting, project management, and trade pricing — Charlotte persona is high-LTV and underserved.
- Introduce live chat (with design advisors available 10am–6pm) — qualitative research showed purchase intent is highest when users have a quick question.
- Build a room visualiser (AR/3D view of products in room context) — tested as highest-desire feature in post-redesign survey.
- Email retention programme: post-purchase nurture sequence segmented by product category and interior style.
